## DID YOU KNOW?

### Vapes contain many TOXIC chemicals such as-

- Diacetyl
- Formaldehyde
- Acetone
- Tin
- Lead
- Propylene Glycol
- Nickel
- Benzene

**Marijuana vapes contain over 300 highly concentrated chemicals!**

Just because it's a plant doesn't mean it's safe!

As of 2020,

**2,807** people have been hospitalized or have died from EVALI caused by e-cigarette, or vaping use

The chemicals Diacetyl & Propylene Glycol in vapes can cause a disease called EVALI. **EVALI** is a serious lung disease that can develop due to vaping.

Marijuana can hurt the developing brain. The brain is still **developing until the age of 25** and is more vulnerable to drug misuse.

Persistent marijuana use starting in adolescence is associated with a **loss of an average of 6 or up to 8 IQ points** measured in mid-adulthood.

Vapes are more addictive than tobacco cigarettes. All vapes contain nicotine salts which deliver nicotine into the blood stream **2.5x faster** than tobacco cigarettes!
